

Emergency Services Education Center

## *Haz-Mat / Confined Space*

ESEC offers the most authentic training grounds for hazardous materials responders, including industrial personnel. It provides students a realistic setting to create a multitude of scenarios such as overturned or over-pressurized tank cars.

Confined spaces present one of the most dangerous environments rescue squad personnel will confront. "Rescuers" represent well over sixty percent of all fatalities associated with confined space operations. In an effort to minimize risk to them as well as the victims, we provide the best obstacle courses to teach guidelines for entry and rescue into any confined space

While working in a trench, a worker can become engulfed by collapsing soil. Knowing how to shore the walls of the trenches, using specialty devices to stabilize the walls in place, firefighters can safely make their way to a victim and continue the rescue

operation. Our facility provides a safe environment for a team to enter and stabilize a trench, while the remainder of the class observes from above.
